Programming Tutorial (Advanced)
Bauhaus-Universität Weimar

Task 1

Go to sqliteonline and complete the following tasks:

- Create a table *Users*.

    - Each user has a unique nickname, an eMail address and a password.

- Users can post *status messages*.

- Two users can be *Friends*.

- Retrieve all nicknames from *Users*.

- Get the last 5 posted messages from a selected user.

- Get the last 3 posted messages of all friends of one user.

Note: Create a textfile where you can store your sqlite code because you will need it next week!
